

Lucia Woollett (Rapanova)

Data Engineer | LLMs | Entity Resolution

Data Engineer with an MSc in Computer Science and professional experience building data pipelines, entity resolution systems, and LLM-based solutions. Strong background in Python, SQL and data engineering, with experience processing multi-million-record datasets and working across data quality and company intelligence projects. Based in US, Florida | Open to Remote

SKILLS

Languages	Data Engineering	Data & ML	AI	Tools
Python, SQL, R, HTML/CSS	PySpark, Databricks, Greenplum, Docker, Apache Airflow	Pandas, Machine learning, Data Analysis, Jupyter	LLMs, Ollama, RAG, GenAI, MCP, pgvector, Entity Resolution	Git, Jira, Linux, Confluence

EXPERIENCE

Data Engineer, Global Marketing

🏢 Dell Technologies 📅 2021 – 2025 📍 Bratislava, Slovakia

- Technical lead for entity resolution project - merging company records across multiple data sources (18-20 data sources), developing company intelligence datasets for downstream business use. Approximately 300k records run weekly, and standard matching reached a confident match on roughly 30% of records in a data source
- Built an LLM pipeline for entity resolution using on-prem open-weight models (Mistral and Llama), replaced manual deduplication with automated web evidence retrieval, raising company matching coverage across databases, and data quality for further business needs. Only high-potential candidates went to this stage, and roughly 60-70% of them were resolved with a confident decision, accepting a match only when both models agreed
- The results were used by several teams: Sales (link accounts and build company hierarchies), Marketing (campaigns and contacting customers), and Demand Intelligence and Modelling (need for cleaner data)
- Participated in a hackathon for domain validation challenges, using web search and LLM pipeline to improve domain data quality
- Communicated technical solutions and project progress to cross-functional stakeholders and leadership
- Key technologies: Greenplum, SQL, Python, Airflow, Bash, GitLab

EDUCATION

MSc Computer Science

🏢 Slovak University of Technology 📅 2022 – 2024

- Notable courses: Neural Networks, Knowledge Discovery, Statistical Methods of Experiment Evaluation, Advanced Methods of Interactive System Design, Information Retrieval
- Thesis: “Prediction of Atomic Forces and Potential Energy Surfaces with Machine Learning Methods” (Key technologies: Python, Dscribe, JupyterLab, ML, NNs, TensorFlow)
- Team Project topic: Ball Detection in Sports Videos - cooperation with Sportradar (fine-tuned and compared YOLO, YOLOs, Deformable DETR and TrackNet on 230K+ annotated frames; best small models reached 0.83 precision and 0.88 recall at 14ms inference). Won second place in Team Project Cup 2023
- Weighted average score: 1.32/5 equivalent to US GPA 3.68/4

BSc Computer Science

🏢 Slovak University of Technology 📅 2018 – 2022

- Notable courses: Intelligent Data Analysis, Artificial Intelligence, Database Systems, Human-Computer Interaction, Data Science Programming
- Thesis: “Improving user experience on the Web” (Key technologies: Python, UX, JupyterLab, Azure Speech Services, VADER, nltk, sentiment analysis)
- Weighted average score: 1.45/5 equivalent to US GPA 3.55/4

OTHER ACTIVITIES AND PROJECTS

Volunteer & Mentor - PyCon, Django Girls, Aj Ty v IT

2020 - 2024

Contributed to technology education initiatives through mentoring, event coordination, and preparation of learning resources

Site Business Academy at Dell Technologies

2025

Completed 10-month development program SBA (Site Business Academy) in which I've gained experience in project management and executive presentations. Our team won 2nd place for the best presentation among 30 participants

The Rise of the AI Engineer (DataExpert)

2026

Completed 1-week bootcamp focused on Databricks, Lakehouse architecture, Data Engineering, and Generative AI
